
TIER — you choose, and nothing descends
a menu
a `config.toml` key, or a flag you type
option A
option C
option B
the one you picked
available
unavailable
exactly what you asked for
it stops, and names what is missing
never option A or C instead

LADDER — the code descends, and nobody is asked
a question with more than one answer
“which passage supports this claim?”
rung 1
most faithful to the source
can't answer
rung 2
answers
can't answer
answers
rung 3
the worst acceptable answer
an answer, always
the run does not stop —
which is why each rung's cost is documented
