
LAYER 3 · ENRICHMENT — optional · you run it, no skill does
chitragupta enrich -- stages …
needs the venv + the enrich group
takes the same write lock as sync
content/docling/ · content/chroma/ · content/topics.json · content/topic_seeds.json · content/topic_set.json
PACKAGE COMMANDS — beside the layers, not one of them
chitragupta init · doctor · install <stage> chitragupta figure sync | check | new | look
bare python · take no lock · never write the ledger
LAYER 1 · CORPUS — deterministic, no LLM, safe unattended
chitragupta corpus sync
needs the venv — bibtexparser
holds the write lock · exit 0 / 1 / 2 / 3
content/ledger.sqlite · content/parsed/<citekey>.txt
the only evidence a writer is given
read if present, never built by a skill
LAYER 2 · DRAFTING — generative, on demand, you review it
.claude/skills/ — six genre skills
read the corpus layer · never write the ledger
the only authority the gate consults
quotable passages
the chain, on every draft
chitragupta draft gate — hard gate
chitragupta draft references
chitragupta draft render
bare python, no venv — by design
LAYER 4 · REVIEW — advisory, never a gate · takes no lock
chitragupta review provenance
chitragupta review coverage
chitragupta review verbatim
bare python · runs happily during a sync
content/review/<topic>/<stem>.{provenance,verbatim,coverage}.md
