query
“digital twin composability”
1 · OVER-FETCH
Chroma returns k × embed_overfetch_multiplier = 5 × 4 = 20 chunks, by cosine distance
2 · RERANK — optional, off by default
a cross-encoder rescores all 20 (query, passage) pairs jointly
[enrich].rerank = true
3 · CAP
at most embed_max_passages_per_source (3) chunks from any one citekey
4 · TRUNCATE
keep the first k — embed_top_k = 5
5 passages
each with citekey, title, snippet, distance
