
Genre B — teaching writers: tutorial-writer, textbook-chapter-writer
1 · CURATE
you, in Zotero
A handful of grounding papers is enough. Breadth buys you very little in this genre.
papers/bibliography.bib
2 · SYNC
deterministic
chitragupta corpus sync
content/ledger.sqlite
content/parsed/*.txt
publish step only
ENRICHMENT — not worth it here
~~docling~~ · ~~embed~~ · ~~bertopic~~ · ~~extract-keywords~~ · ~~seed-topics~~ · ~~converge~~ · ~~topic-graph~~
Neither SKILL.md mentions embed_index. Both use chitragupta.retrieval.search() — BM25, stdlib — and building a semantic index to place four citations is effort spent in the wrong place.
render is the drafting layer's own publish step
chitragupta draft render — it was never enrichment work, and is deliberately not a stage
5 · PUBLISH
chitragupta draft references
tutorial-writer keeps the default References heading, which the render swaps for citeproc's single bibliography
chitragupta draft render --format pdf
PASS · exit 0 (often trivially)
4 · VERIFY
chitragupta draft gate
May legitimately pass with zero citations. Both SKILL.md files say so explicitly — this is the one genre where an empty reference list is correct.
3 · DRAFT
mostly original content
tutorial-writer — one path, keyboard-first, verified to actually run. Citations are banned mid-lesson; they live only in a closing "Where to go next".
textbook-chapter-writer — objectives, worked examples, exercises. Cites for motivation and background only.
content/drafts/<slug>.md
the real failure mode here isn't a bad citekey
It is writing the wrong genre: a tutorial that explains instead of instructing, or a chapter that instructs instead of explaining. Both SKILL.md files open by warning about exactly that — and no gate in this repository can catch it.
You are the check.
FAIL · exit 1
DISCARD DRAFT
drop the claim; the lesson rarely needed it in the first place
re-draft · loop until it passes
